Ivar Cashin Eriksson

Hello Corti team,

I am writing to join Corti's Talent Community. I am a curious data scientist with seven years of experience in applied machine learning, medical imaging, pharmaceutical analytics, and ML engineering. Corti's focus on clinical-grade AI aligns well with the kind of work I want to do, machine learning in healthcare, built carefully enough so that it can support people in high-stakes settings.

My work at RaySearch Laboratories is directly relevant to Corti's mission. There, I worked on automating radiotherapy planning, helping to improve patient outcomes whilst saving clinicians' time. I developed methods using autoencoders, sparse Gaussian processes, and optimisation on segmented 3D CT scans, and collaborated with medical physicists and clinicians to align the models with oncological standards and practical workflows. That experience made the gap between a working model and a clinically useful model very concrete. Working at RaySearch was genuinely exciting and I would like to get the chance to work in a similar domain again.

I have also worked on applied ML systems in pharmaceutical and industrial settings. At Signum Life Science, I am building an end-to-end forecasting platform for pharmaceutical price and demand. Earlier in the role, I owned and extended a next-best-action system for pharmaceutical sales, including explainable AI features built in collaboration with UX designers. At Valcon, I led development of a production real-time neural-network pipeline involving natural-language inputs and high-dimensional labels, while also mentoring colleagues and running explainable AI training.

Though I do not have direct experience with clinical dialogue systems, my background is highly relevant: Healthcare AI, pharmaceutical analytics, production ML pipelines, explainability, and working with domain experts when model behaviour matters.

Outside work, I like to stay close to building as well. I enjoy personal projects, including designing and building furniture with a modern minimal aesthetic, and I am usually happiest when I can understand a problem carefully and turn that understanding into something concrete.

I would welcome the opportunity to discuss where my background could be useful at Corti, particularly in applied ML, data science, research, or ML engineering roles. Regards,

Ivar Cashin Eriksson.
