Research Profile

Quantitatively trained ML researcher-engineer with an MSc specialisation in Statistical Learning and Data Analytics from KTH, a BSc in Engineering Physics, thesis-level research in probabilistic dose prediction for radiotherapy planning, and recent delivery of production ML systems under latency and quality constraints.

Education

2015–2020 **Royal Institute of Technology (KTH)**, *MSc and BSc in Engineering Physics*, Stockholm, Sweden

MSc specialisation: Statistical Learning and Data Analytics; GPA 5.0/5.0. BSc in Engineering Physics; GPA 5.0/5.0. Thesis: Image Distance Learning for Probabilistic Dose-Volume Histogram and Spatial Dose Prediction in Radiation Therapy Treatment Planning.

Research Experience

2019–2021 **Researcher within Data Science**, *RaySearch Laboratories*, Stockholm, Sweden

Worked on automating radiotherapy planning using deep learning, probabilistic modelling, and multi-objective optimisation.

Built pipelines for latent anatomical features from segmented 3D CT scans using autoencoders, and predicted dose-volume histograms and spatial dose distributions using sparse Gaussian processes.

Collaborated with medical physicists and clinicians to align the models with oncological standards and practical workflows.

Selected ML Engineering Experience

2024– **Full-Stack Data Scientist, Project Manager**, *Signum Life Science*, Copenhagen, Denmark

Present Maintains a pharmaceutical price forecasting platform and current embedding-based similarity search and matching workflows.

Works across architecture, data science, ML engineering, and software engineering on production systems.

2022–2024 **Principal Data Scientist, Consultant**, *Valcon*, Copenhagen, Denmark

Architected and implemented an end-to-end production pipeline for a real-time deep neural network.

Built an invoice quality-control ML system with around two-second response time and 100% recall in the first two weeks of production.

Regularly presented technical topics to non-technical stakeholders.

2021–2022 **Data Scientist, Consultant**, *Valtech*, Copenhagen, Denmark

Built time-series forecasts and clustering models for e-commerce use cases, and worked closely with business stakeholders to keep outputs actionable.

Selected Projects

2025– **Project iris**, Solo project

Present End-to-end computer vision system for making product images interactive, with real-time clickable link overlays.

Methods and Technical Skills

Programming Python, SQL, C++, Matlab

ML PyTorch, TensorFlow, Scikit-learn, XGBoost, OpenCLIP, Facebook Prophet

Engineering FastAPI, MongoDB, Qdrant, AWS, GitHub Actions

Methods Autoencoders, CNNs, sparse Gaussian processes, time series forecasting, clustering, explainable AI

Languages

English (native), Swedish (native), Danish (intermediate)
